experience as an investigator.

6. Reporting UFO Information. Both the Assistant Chief of Staff Intelligence, Headquarters USAF, and the Air Defense Command have a direct and immediate interest in the facts pertaining to UFO's reported within the United States.

a. All Air Force activities will conduct UFO investigations to the extent necessary for their required reporting action (see paragraphs 15, 16, and 17). However, investigations should not be carried beyond this point, unless such action is directed by Assistant Chief of Staff, Intelligence, Headquarters USAF, or the preparing officer believes the magnitude (intelligence significance

The "Face"
Lava Flow Edge
Sink Holes or Dunes
Lava Flow Edge
Wind eroded mountains or volcanos
Frame from Viking Image 70A13 Raw Data. Enhanced with False Color to Greyscale.
The fabled "Face" is shown here from an enlargement of the same frame, clearly displaying convolutions which would account for the facial shadows. This mound appears consistant with others in the picture and probably nothing more than a wind eroded volcanic prominance.
Please note that this image is an approximation of the Cydonia region, and should not be considered final, however the surface features do seem consistant with the Mars topography.
This graphic is an enhancement of the raw data frame 70A13 taken by the Viking Mars probe during it's flyby of the planet's Cydonia region. Using false-color paletting and histogram equalization, this area appears to largely volcanic in nature. Note the pronounced outline of the vast lava sheet defined by the edge overlay lines. Rivulets and lava runoffs are clearly visible. The "U" shaped craters seem to be sinkholes or steep dunes. The "mountains" to the right are probably volcanic prominances or gas bubbles, eroded by high winds.
Original 70A13 frame courtesy of the National Aeronautics and Space Administration. Graphics enhancements by David A. Seiver
